### Call Management System

#### Introduction:

- Call Management System is web based call management software, designed to use for businesses to reduce telephone costs, increase productivity, schedule task for service staff and much more.

- Call management system is a workflow application. User registers their problems under Call Registration section. Key users are defined for group of users by admin. They look for the problems sent by users and decide whether to respond or pass them to admin. Admin assigns cases to service members. Admin can switch the cases from one to another service engineer. Service engineer submits the solution to each cases.

## Features:

(1) Four level hierarchy: User, Key User, Service Member and Admin.
